SPECIAL PREPARATORY CONSIDERATIONS

Ingredient-Specific Information

Moisture sensitive (protect from humidity whenever possible): Sodium Bicarbonate

Suggested Preparatory Guidelines

Non-Sterile Preparation Sterile Preparation

Processing Error / Testing Considerations: To account for processing error, pH testing, sterility and endotoxin testing considerations during preparation, it is suggested to measure an additional **10 to 12%** of the required quantities of ingredients.

Special Instruction: This formula must be prepared within the appropriate facilities under adequate environmental conditions, following the necessary guidelines and procedures as stated within *USP 797*. Only trained and qualified personnel must prepare this formula.

All heat stable, reusable materials and equipment must be sterilized and depyrogenated by dry heat sterilization at 250°C for 2 hours prior to use.

Every batch of final product compounded using this procedure must be sterility and endotoxin tested before being dispensed.

Protective apparel, such as a sterile gown, sterile gloves, shoe covers, head cap, eyewear and face-masks should always be worn. In addition, proper personnel cleansing must be done before entering the buffer or clean area.

Filter integrity must be validated by performing a filter stress test. If the test demonstrates that the filter might be defective, the solution must be discarded and remade.

This procedure requires the use of very small quantities of ingredients. All calculations and preparation techniques must be verified before dispensing the final product.

3.	<p><u>pH testing:</u></p> <p>A. Draw an appropriate amount of the mixture (step 2A).</p> <p>B. Test the pH of the sample. It should lie between 8.1 and 8.5.</p> <p>C. <u>If the pH < 8.1, carefully add in a dropwise manner the Sodium Hydroxide 1N Solution to the mixture:</u></p> <ol style="list-style-type: none">1. Draw and transfer 1 or 2 drops of the Sodium Hydroxide 1N Solution to the mixture.2. Stir for at least 5 minutes to evenly disperse the Sodium Hydroxide 1N Solution.3. Re-test the pH.4. Continue to add the Sodium Hydroxide 1N Solution until the pH of 8.1 to 8.5 is obtained. <p>IMPORTANT: Do not allow the pH to rise above 8.5.</p>		
4.	<p><u>Filling to volume:</u></p> <p>A. Add additional Sterile Water For Injection to the above mixture to fill to the required batch size (50.0 mL <i>plus</i> processing error adjustments).</p> <p><u>Specifications:</u> Continuously mix.</p> <p><u>End result:</u> Homogeneous liquid-like solution.</p>		
5.	<p><u>Filtering and transferring:</u></p> <p>Aseptically filter the solution through a 0.22-µm sterile filter into the recommended dispensing container (see Packaging requirements). Transfer the remainder into a separate dispensing container. This is to be used as the Test sample for sterility and endotoxin testing.</p>		
6.	<p><u>Filter integrity test:</u></p> <p>Validate filter integrity by performing a filter stress test. If the test demonstrates that the filter might be defective, the solution must be discarded and remade.</p>		
7.	<p><u>Sterility testing:</u></p> <p>Validate the Test sample for sterility and endotoxins, in accordance to current USP 797 regulatory guidelines.</p>
