Suggested Formula	Metoclopramide 5 mg/mL Intramuscular Injection (Solution, 100 mL)	FIN	F 004 921v2
----------------------	---	-----	-------------

SUGGESTED FORMULATION

Ingredient Listing	Qty.	Unit	NDC #	Supplier	Lot Number	Expiry Date
Metoclopramide Hydrochloride, USP	TBD					
Benzyl Alcohol (Parenteral Application), NF	2.0	mL				
Sodium Metabisulfite, NF	0.15	g				
Sodium Chloride, USP	0.371	g				
Sterile Water for Injection, USP	90.0	mL	©			
Sterile Water for Injection, USP	q.s. to 100.0	mL		,		
Sodium Hydroxide 10% Solution	As required			1		
Hydrochloric Acid 10% Solution	As required					

SPECIAL PREPARATORY CONSIDERATIONS

Ingredient-Specific Information

Light Sensitive (protect from light whenever possible):

Metoclopramide Hydrochloride, Sodium

Metabisulfite, Benzyl Alcohol

Air Sensitive (protect from air whenever possible): Sodium Metabisulfite

Moisture Sensitive (protect from humidity whenever possible): Sodium Metabisulfite

TELEPHONE: 514-905-5096 FAX: 514-905-5097 technicalservices@medisca.net

Suggested Metoclopramide 5 mg/mL Intramuscular Injection (Solution, 100 mL) FIN F 004 921v2 Formula

SPECIAL PREPARATORY CONSIDERATIONS (CONTINUED) Suggested Preparatory Guidelines Non-Sterile Preparation Sterile Preparation Processing Error / To account for processing error, pH testing, sterility and endotoxin testing **Testing Considerations:** considerations during preparation, it is suggested to measure an additional 5 to 9% of the required quantities of ingredients. **Special Instruction:** This formula may contain one or more Active Pharmaceutical Ingredients (APIs) that may be classified as hazardous, please refer & verify the current NIOSH list of Antineoplastic and Other Hazardous Drugs in Healthcare Settings. At this time, General Chapter <800> Hazardous Drugs – Handling in Healthcare Settings is informational and not compendially applicable unless otherwise specified by regulators and enforcement bodies. For information on the scope, intended applicability, and implementation context for USP General Chapter <800>, see: https://www.usp.org/compounding/general-chapter-hazardous-drugs-handlinghealthcare. This formula must be prepared within the appropriate facilities under adequate environmental conditions, following the necessary guidelines and procedures as stated within USP 797 and USP 800 when handling hazardous drugs. Only trained and qualified personnel must prepare this formula. All heat stable, reusable materials and equipment must be sterilized and depyrogenated by dry heat sterilization at 250°C for 2 hours prior to use. Compounder needs to verify as per USP, if every batch of final product compounded using this procedure must be sterility and endotoxin tested before being dispensed. All required personal protective equipment (sterile and hazardous if applicable), such as but not limited to, gowns, aprons, sleeves, gloves both inner and outer if applicable, shoe covers, hairnet, head cap, beard cover, eyewear, appropriate face mask, respirator and face shield, etc., where applicable must be worn at all times. In addition, proper personnel cleansing must be done before entering the buffer or clean area. If applicable, follow all required procedures for hazardous drug handling including but not limited to procurement, transport, storage, preparation, dispensing, administration, clean up (spills) & disposal. Filter integrity must be validated by performing a filter stress test. If the test demonstrates that the filter might be defective, the solution must be discarded and remade. If you are a registered 503B facility, please refer to all relevant guidance documents including but not limited to the Code of Federal Regulations (CFR), Guidance for Industry (GFIs) and Compliance Policy Guides (CPGs).

This procedure requires the use of very small quantities of ingredients. All calculations and preparation techniques must be verified before dispensing the final product.

---	---------------------------------------	-----	-------------

SUGGESTED PREPARATION (for 100 mL)

Weigh and / or measure the following ingredients when appropriate:

Ingredient Listing	Qty.	Unit	Multiplication factor (*):	Processing Error	Qty. to measure
Metoclopramide Hydrochloride, USP §	TBD				
Benzyl Alcohol (Parenteral Application), NF §	2.0	mL			
Sodium Metabisulfite, NF §	0.15	g	(
Sodium Chloride, USP §	0.371	g			
Sterile Water for Injection, USP §	90.0	mL	1		
Sterile Water for Injection, USP §	q.s. to 100.0	mL	0		
Sodium Hydroxide 10% Solution §	As required		O .		
Hydrochloric Acid 10% Solution §	As required	4			

- * Takes into account increased batch size conversions and density conversions, if required.
- § Weigh / measure just prior to use.

Preparatory Instruction

IMPORTANT: All preparatory procedures must be performed using proper Aseptic Technique

1. **Equipment sterilization:**

Following the manufacturer's specifications, sterilize and depyrogenate all heat stable, reusable materials and equipment, then return to ambient temperature.

Suggested Formula

Metoclopramide 5 mg/mL Intramuscular Injection (Solution, 100 mL)

FIN

F 004 921v2

5. pH testing:

- A. Draw an appropriate amount of the mixture (Step 4A).
- B. Test the pH of the sample. It should lie between 3.5 and 5.5.
- C. If the pH < 3.5, carefully add, in a dropwise fashion, the Sodium Hydroxide 10% Solution to the mixture:
 - 1. Draw and transfer 1 or 2 drops of the Sodium Hydroxide 10% Solution to the mixture.
 - 2. Stir for at least 5 minutes to evenly disperse the Sodium Hydroxide 10% Solution.
 - 3. Re-test the pH.
 - 4. Continue to add the Sodium Hydroxide 10% Solution until the pH of 3.5 to 5.5 is obtained.

IMPORTANT: Do not allow the pH to rise above 5.5.

- D. If the pH > 5.5, carefully add, in a dropwise fashion, the Hydrochloric Acid 10% Solution to the mixture:
 - 1. Draw and transfer 1 or 2 drops of the Hydrochloric Acid 10% Solution to the mixture.
 - 2. Stir for at least 5 minutes to evenly disperse the Hydrochloric Acid 10% Solution.
 - 3. Re-test the pH.
 - 4. Continue to add the Hydrochloric Acid 10% Solution until the pH of 3.5 to 5.5 is obtained.

IMPORTANT: Do not allow the pH to fall below 3.5.

6. Filling to volume:

A. Add additional Sterile Water for Injection to the above mixture to fill to the required batch size (100.0 mL *plus* processing error adjustments).

Specifications: Continuously mix.

End result: Homogeneous liquid-like solution.

7. Filtering and transferring:

Aseptically filter the solution through a 0.22-µm sterile filter into the recommended dispensing container (see Packaging requirements). Transfer the remainder into a separate dispensing container. This is to be used as the Test sample for sterility and endotoxin testing.

8. Filter integrity test:

Validate filter integrity by performing a filter stress test. If the test demonstrates that the filter might be defective, the solution must be discarded and remade.

----------------------	---	-----	-------------	--

9. **Terminal Sterilization:**

In relation to the chemical composition of the formulation, final packaging, etc., select and validate an end-stage sterilization method and follow the manufacturer's specifications.

10. Sterility and Endotoxin testing:

Validate the Test sample for sterility and endotoxins, in accordance to current USP 797 regulatory guidelines.
